

The Leader in Powered Envelopes

## BIPV Dry Screen

BUILDING INTEGRATED PHOTOVOLTAICS

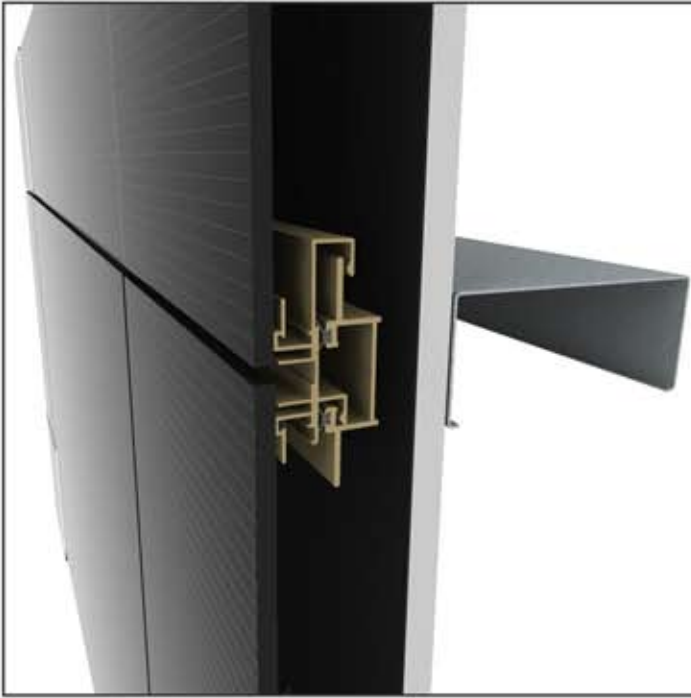

**Our BIPV Dry Screen is the perfect product to add to the side of any existing or new construction project.**

Our creative modular grid design allows for exceptional architectural tolerances and very simple, cost effective installations. An existing concrete wall can be made beautiful and generate electricity.

The open-joint dry screen façade system controls rain penetration, maintains ventilation, and provides thermal insulation.

The system is compatible with all composite metal panels and will fully integrate glass and resin panels on the same plane or multiple planes as desired.

# BISEM BIPV Dry Screen

1. All UL Rated PV Panels are compatible with BISEM Systems, allowing ultimate versatility.
2. The BISEM System accepts any type of infill, thin film PV panels, insulating glass, ACM panels, resin panels, or metal plate panels. Sustainable design possibilities are endless.
3. Waterproof Guaranteed. Fully pressure equalized design delivers superior air and water performance.
4. Clean 5/8" dry joint for clean aesthetic reveal.
5. Full BIM and project management support allows for ease of design, fabrication and material orders.
6. Easy installation and training by qualified glaziers.
7. Flexible mullion colors.
8. Made in the USA, delivering short lead times and increased LEED points.
